

STANFORD

CARE AND REHABILITATION

TESTIMONIAL

"The therapy staff was wonderful. I truly feel that they helped me tremendously."

- Janet "Susie" Peek

Janet "Susie" came to Stanford Care and Rehab after a hospitalization due to a fall in her home where she laid in her bathroom floor for several days, unable to call for help. She was diagnosed with a UTI and severe pneumonia resulting in sepsis. She was deconditioned, very weak, and heartbroken after learning of her oldest son's death the day of her fall. Living alone and being responsible for all physical and ADL care for herself, she had a long road of recovery ahead of her before she would be able to

safely return home.

Through extensive Occupational Therapy and Physical Therapy, she became stronger and was able to do all her ADL care and transfers. Despite all the setbacks, Susie persevered and achieved the goal she set for herself, to return home. Susie is proof you can achieve anything when you set your mind to it and put in the hard work to achieve it. We are so proud of you Susie!
